## Exhibit A

## Amended Claims

- --78. (Twice Amended) A composition which comprises:
  - a) a conjugate of i) a ganglioside derivative which comprises an unaltered oligosaccharide part and an altered ceramide portion comprising a sphingosine base, to ii) Keyhole Limpet Hemocyanin or a derivative thereof comprising an ε-aminolysyl group;
  - b) a saponin derivable from the bark of a Quillaja saponaria Molina tree; and
  - c) a pharmaceutically acceptable carrier; the relative amounts of such conjugate and such saponin being effective to stimulate or enhance antibody production in a subject;

wherein the ganglioside derivative is a derivative of a ganglioside selected from the group consisting of GM2, GM3, GD2, GD3, GD3 lactone, O-acetyl GD3 and GT3; [and]

wherein in the conjugate the ganglioside derivative is [conjugated] covalently bound to Keyhole Limpet Hemocyanin or the derivative thereof through a C-4 carbon of the sphingosine base of the ceramide portion of the ganglioside derivative to the  $\varepsilon$ -aminolysyl group of Keyhole Limpet Hemocyanin or the derivative thereof, wherein the C-4 carbon is present in a CH<sub>2</sub> group; and

wherein the derivative comprises Keyhole Limpet
Hemocyanin linked to an immunological adjuvant, a
non-ionic block copolymer, or a cytokine.--

--93. (Twice Amended) A method of stimulating or enhancing antibody production in a subject which comprises administering to the subject an effective amount of a composition which comprises:

- a) a conjugate of i) a ganglioside derivative which comprises an unaltered oligosaccharide part and an altered ceramide portion comprising a sphingosine base, to ii) Keyhole Limpet Hemocyanin or a derivative thereof comprising an  $\epsilon$ -aminolysyl group;
- b) a saponin derivable from the bark of a Quillaja saponaria Molina tree; and
- c) a pharmaceutically acceptable carrier; the relative amounts of such conjugate and such saponin being effective to stimulate or enhance antibody production in the subject;

wherein the ganglioside derivative is a derivative of a ganglioside selected from the group consisting of GM2, GM3, GD2, GD3, GD3 lactone, O-acetyl GD3 and GT3; [and]

wherein in the conjugate the ganglioside derivative is [conjugated] covalently bound to Keyhole Limpet Hemocyanin or the derivative thereof through a C-4 carbon of the sphingosine base of the ceramide portion of the ganglioside derivative to the  $\epsilon$ -aminolysyl group of Keyhole Limpet Hemocyanin or the derivative thereof, wherein the C-4 carbon is present in a CH<sub>2</sub> group, so as to thereby stimulate or enhance antibody production in the subject; and wherein the derivative comprises Keyhole Limpet Hemocyanin linked to an immunological adjuvant, a non-ionic block copolymer, or a cytokine.--

(Twice Amended) A method of treating a cancer in a subject which comprises administering to the subject an effective cancer treating amount of a composition which comprises:

- a) a conjugate of i) a ganglioside derivative which comprises an unaltered oligosaccharide part and an altered ceramide portion comprising a sphingosine base, to ii) Keyhole Limpet Hemocyanin or a derivative thereof comprising an  $\epsilon$ -aminolysyl group;
- b) a saponin derivable from the bark of a Quillaja saponaria Molina tree; and
- c) a pharmaceutically acceptable carrier; the relative amounts of such conjugate and such saponin being effective to stimulate or enhance antibody production in the subject;

wherein the ganglioside derivative is a derivative of a ganglioside selected from the group consisting of GM2, GM3, GD2, GD3, GD3 lactone, O-acetyl GD3 and GT3; [and]

wherein in the conjugate the ganglioside derivative is [conjugated] covalently bound to Keyhole Limpet Hemocyanin or the derivative thereof through a C-4 carbon of the sphingosine base of the ceramide portion of the ganglioside derivative to the  $\varepsilon$ -aminolysyl group of Keyhole Limpet Hemocyanin or the derivative thereof, wherein the C-4 carbon is present in a CH<sub>2</sub> group, so as to thereby treat a cancer in the subject; and

wherein the derivative comprises Keyhole Limpet Hemocyanin linked to an immunological adjuvant, a non-ionic block copolymer, or a cytokine.--
